

## NETWORK DESIGN AND OPTIMIZATION

*Supply chain design and optimization impact 80% of your total network spend. – AMR Research*

NETWORK DESIGN AND OPTIMIZATION capabilities within Schneider support your pursuit of supply chain efficiencies and implementation of strategic logistical transformation initiatives. Our cross-functional project teams are equipped with the leading analytic tools and mathematical methods, and are experienced in most industry sectors and geographies.

### SCHNEIDER'S CORE COMPETENCIES

### BENEFIT

A properly developed network design allows you to:

- Improve network and transportation financial metrics
- Visualize and understand complexity of your network
- Assimilate data for assessing and modeling
- Identify and prioritize network improvements that save your company money
- Cut across all channels, divisions and countries
- Determine how your network should be re-designed
- Answer “What if...” questions based on uncertainties
- Develop “Implementable” solutions tailored to you
- Established implementation roadmap

### SCHNEIDER'S INDUSTRY LEADERSHIP

- Expertise in logistics, operations, engineering, transportation, network optimization, and process analysis
- Both customized and off-the-shelf modeling solutions
- Diverse sector experiences from automotive to consumer packaged goods to heavy mfg to retail
- Multiple geographies with offices in the Americas, Europe, and Asia and local subject matter experts running your projects
- 3PL experience in designing AND implementing solutions

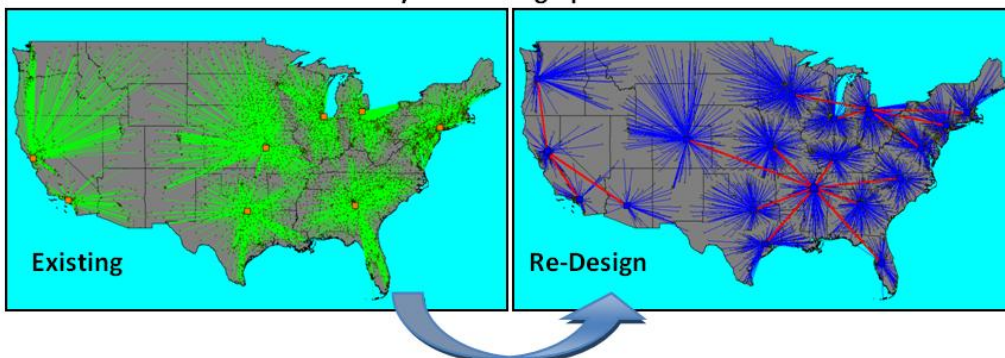

### USA Route Design

### KEY FACTS:

- Over 500 engineering studies resulting in over \$200 million in customer savings
- Over 40 engineers in North America, Europe and Asia.
- Advanced degrees (PhD, MS in IE, OR, Statistics, CS)
- Over 70 industry experts with operational experience in transportation and carrier management, warehousing, and logistical planning

### Distribution Network & Inventory Positioning Optimization
